DESCRIPTION:
- A fiber reinforced stucco base concentrate
- Factory prepared mixture of Portland cement, fibers, and proprietary ingredients
- Specified sand is added at the job site
- Can be installed 3/8-1/2 in. (9.5-12.7 mm) thick in one application
- Color: Gray

USES:
- Stucco Base over:
  - Concrete
  - Masonry
  - Metal lath
- Lath is applied over:
  - Appropriate water resistive barrier over continuous sheathing
  - Expanded polystyrene (EPS). Per LaHabra Specification and Application Guide. (Not for Interior)

COMPOSITION:
- Binder: Portland cement
- Synthetic fibers
- Mineral and organic additives (add specified sand at job site)

MATERIAL STANDARDS:
- Cement: ASTM C150
- Lime: ASTM C206
- Fibers: ASTM C1116

PROPERTIES:
Meets code criteria for exterior cementitious coating.
ICC-ES Report ESR-2564 includes 1 hour fire-resistant assemblies.

COVERAGE:
Depending on the condition of the substrate, thickness of application, and amount of sand added approximate coverages per bag are:
- at 3/8 in. (9.5 mm): 75-90 ft² (6.97-8.36 m²)
- at 1/2 in. (12.7 mm): 60-72 ft² (5.57-6.69 m²)
Coverage may vary due to ambient temperature, surface temperature, surface porosity, mixing methods, application methods, amount of water, wall type and metal lath type. Coverage must be verified in the field using the same procedures and conditions that will be present at the project.

CONTAINER:
80 lb (36 kg) net weight in a moisture resistant bag.

WORKING TIME:
Sets in 30-45 minutes after mixing, depending on conditions.

SURFACE PREPARATION:
- On masonry and concrete, apply only to surfaces that are sound, clean, dry, unpainted, and free of any residue which may affect the ability of LaHabra Fastwall Stucco Base to bond to the surface.
- Solid bases shall have sufficient suction (ability to absorb water) or surface roughness or both to ensure an adequate bond for LaHabra Fastwall Stucco Base.
- On lathed construction, apply to lathing installed in accordance with ASTM C1063.
- LaHabra Fastwall Stucco Base requires water-resistive barrier installed and flashed in accordance with building code and to form a water-shedding surface. Stucco is not a water-resistive barrier.
- Install water-resistive barrier (type and method of application) per Parex USA Stucco Application Guide or Specifications.
- Do not apply to substrates which are frozen or contain frost or ice.
- Apply to surface prepared as for Portland cement plaster.
- For additional surface preparation options, contact Parex USA Technical Support.

MIXING INSTRUCTIONS:
- Use clean equipment for mixing and preparation.
- Start with approximately 3 gal (11.35 L) of clean potable water. And approximately 60 lbs. (27.2 kg) of the sand. Add 1 bag of LaHabra Fastwall Stucco Base Concentrate. Add remaining sand along with additional water- approximately 1-3 gal (3.8-11.35 L) for workability. Total amount of sand equals 2 1/2 - 3 cubic ft (200-240 lbs or 91-109 kg). Allow the material to slake then break set. If needed, add water for workability.
- Use cool, potable water; let hose run to clear it of hot water.
- Sand: Sample and test in accordance with ASTM C897 or C144, and grade within the following limits:

** These are typical laboratory test results but do not constitute a specification.
Use LaHabra Fastwall Stucco Base immediately after mixing.
Do not retemper LaHabra Fastwall Stucco Base.

Parex USA Adacryl Acrylic Admix & Bonder: As an admix, use up to 1 gal (3.8L) per bag of LaHabra Fastwall Stucco Base Concentrate. After the dry components and the majority of the water has been mixed, add the acrylic admix in place of 1 gal. (3.8L) of water. Mix no longer than required to provide a uniform mixture. DO NOT OVERMIX. Over-mixing entrains excessive amounts of air which weaken the material. Do not re-temper mixes over 20 minutes old.

Only Parex USA approved additives may be added to this product.

NOTE: If Parex USA Adacryl is mixed into LaHabra Fastwall Stucco Base and LaHabra Exterior Stucco Color Coat Finish is used, then Parex USA Adacryl must be used in the exterior Stucco Color Coat Finish also. No unapproved additives are allowed.

APPLICATION:
Read the entire label before using this product. For complete application procedures refer to ICC-ESR 2564. For more complete installation instructions, see the Parex USA Stucco Application Guide.

Thoroughly dampen concrete and masonry substrate if necessary before applying LaHabra Fastwall Stucco Base.
Apply by hand trowel or plaster gun to a minimum 3/8 in. (9.5 mm) thickness. The maximum thickness applied in one pass should be 1/2 in. (12.7 mm).

Limitations:
Ambient and surface temperature must be 40°F (4°C) or higher during application and drying time. Protect from freezing for a period of not less than 24 hours after set has occurred. Provide supplemental heat and protection from precipitation as needed.
